

## Technical Datasheet: BG 732

### Product Description:

Polyethylene Terephthalate bottle grade chips (highly viscous) is a condensation polymer produced by a continuous melt phase polymerization process followed by a solid state polymerization process, with an I.V of 0.75-0.85. The products has an excellent transparency and gloss, an outstanding gas barrier against oxygen and carbon dioxide and outstanding toughness and impact strength.

### Applications:

- Mineral Water
- Edible Oil
- Small Jars
